

## Traction Engine Day 27<sup>th</sup> October 2018.

Thanks to Andrew Morgan, we were invited by Richard Pearce to Hadlow to see some Steam Traction Engines before they were stored for winter hibernation.

Not only did we see them, we were told their history and even drove them around the industrial estate. We were also let loose on a 1931 Dennis truck which some of us drove.

A knowledgeable group of enthusiasts and owners look after the Engines including fabricating any parts that are no longer available.

They travel the country showing the Engines and taking part in Ploughing contests.

The Engines are transported on fantastic looking low-loaders which were also onsite.

Apart from more Traction Engines, a few other vehicles were undergoing restoration including a vintage Crane, Water Carrier and an Allis-Chalmers Bulldozer.
